The SA Government 30 Year Plan calls for increasing tree canopy cover. However, the draft Code’s larger developments and easier tree removal on private and public land will lead to significant reduction in tree cover and habitat loss. The draft Code’s increased infill development, reduction in minimum site areas, site coverage setbacks and increased number of street crossovers will all contribute to heat bank effect. This is an unacceptable loss of local character and amenity in my/our neighbourhood.

Further consultation is required and date for the current consultation extended.

I/we would like further community consultation once the Code’s errors have been corrected and the draft updated.
