Q14 Please enter your general feedback here

Dwelling sittings and setbacks.
These should be consistent with existing dwellings in the area. Upper levels should not overlook privacy of adjacent dwellings – either by opaque window glazing or other designs.

Historic area overlay.
Councils have already relaxed historic and heritage requirements. The planning and design code should retain individually identify contributory items. Councils should be able to determine these and identify them so that prospective developers or buyers are aware before purchase.

Historic areas area developments must reflect the design characteristics of the area and preferably the street.

Public notification of Development
Public notification must be retained so that adjacent and facing property owners have an opportunity to comment on proposed development and buildings.

Impact on infrastructure and essential services.
The capacity and impact on infrastructure and essential services must be included in any development. For example gas pressure to my property was impacted by additional dwellings being connected to gas supply, without increasing the capacity of gas pipes.

Tree Canopy and Climate Resilience
Removed trees and large developments must compensate by providing replacement trees and open space in the area.
Greater density housing can result in more artificial surface (eg roofs, driveways, paths) per square kilometre which directly impacts environmental temperatures and energy use.
New developments should have requirements for energy sustainability and there should be offset of new dwellings with nearby open space – eg more local/urban park spaces. This is particularly important in established areas.
